

Unity™
Network Management

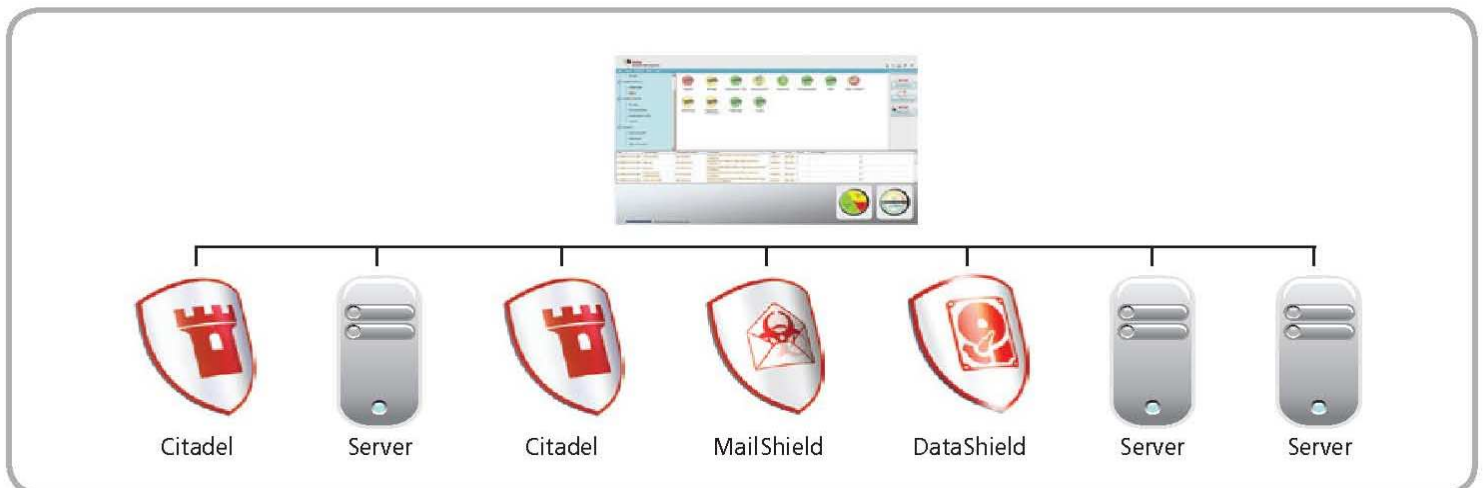

The core of the Atera solution offers resellers real time remote management of networks and services. Unity™ transforms VAR's into Managed Service Providers.

Monitor entire client base

- 24/7 online monitoring of firewalls, servers and services
- Remote management of Atera Products
- Multiple alert options to minimize downtime
- Upgraded customer service

Save time and effort

- Simple intuitive management
- Connect IPSec tunnels and create user to site VPN with a click of a button
- Access LAN Stations using RDP/VNC
- Receive Logs and statistics
- Easy to install

Unity™ – Simple intuitive management

- A simple and intuitive management system designed for immediate deployment with minimal initial training.
- Change configuration, apply QOS, manage email users and reconfigure firewall rules from a central remote user interface.

Unity™ – Constant connectivity

- Monitor both the Atera Citadel™ Traffic Shaping Firewall and other firewall appliances and get a broad view of your customers' status.
- Constant customer monitoring allows immediate network failures alert notifications (Sound, mail, SMS) and quick recovery.
- Create secure IPSec tunnels between Atera Citadel™ devices with a click of a button and access any workstations in the network using RDP or VNC.

Unity™ – In-depth network analysis

- Discover future problems and avoid security risks & network failures.
- Analyze informative logs and detailed system statistics.
- Individual device reporting allows detailed management policies and insures coherency and constant connectivity in your networks.

Unity™ - Upgrade your customer service and become an MSP

- Recruit new customers by offering 24/7 real time customer monitoring.
- Prepare detailed reports for your customers explaining security activities, current threats and actions taken.
- Constant monitoring and management means a closer relationship with the customer resulting in higher retention rate and higher switching costs.

SAGE
DOING IT THE SMART WAY

ATERA
networks The SMB Security Company

Manage multiple networks simultaneously

A single unified control panel will give you maximum control over your customers' networks and solve problems before your clients will know they happened – customer service like never before.

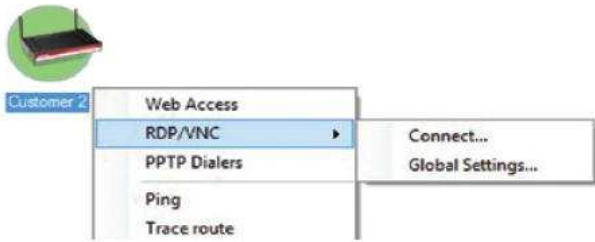

IPSec tunnels with a click of a button

Connect Atera Citadel™ appliances via an IPSec tunnel through a very simple and easy process. Save long frustrating work hours with this simple and easy feature. IPSec tunnel creation was never easier.

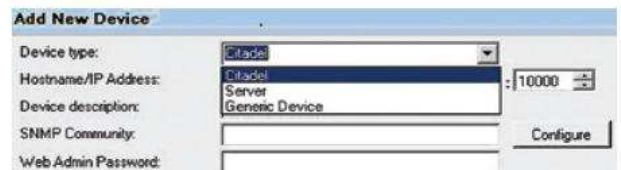

Immediate RDP VNC creation

Connect to any LAN station in the network with a simple intuitive process. Once saved the Unity™ will remember each station in the network.

Easily add and monitor new devices

Unity™ allows you to monitor Atera Citadels as well as other firewall appliances, servers and websites.

Real time network overview

Receive immediate alerts in case of system failure.

- Green** – system stable
- Yellow** – System warning. Attention needed
- Red** – Critical state. Immediate action required

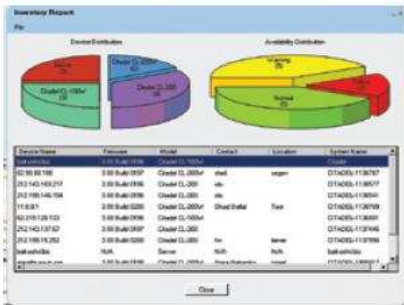

Quick user to site VPN creation

Connect your customers from a remote location to their networks with an automatically generated dialer file – eliminate support phone calls and save time.

Advanced logs and statistics

Analyze useful logs and detailed system statistics for effective management of your entire customer base.

Customer Information

Record and monitor Customer information.
